

OUR HYLOMAR RANGE

HYLOMAR UNIVERSAL BLUE

- HyloMAR Universal Blue is a high performance, non-setting gasket and jointing compound.
- Allows for metal on metal contact.
- The non-setting feature allows easy dismantling of components for service and repair work
- Available as light, medium and heavy viscosity product that can be used in an array of applications.

HYLOMAR M

- A highly engineered, non setting and non hardening setting compound.
- Frequently used in oil and water pumps due to being extremely resistant to fuels, oils, coolants and gases
- Simple application for use on metal and plastic close fitting components
- Can be used with or without a gasket.

HYLOTYTE RED 100

- HyloTYPE Red 100 is a synthetic, semi-hardening jointing compound that has excellent gap filling properties.
- Highly resistant to water and synthetic oils forming an instant seal.
- Versatile in sealing cooling systems such as water pumps and radiators
- Excellent resistance to fluids, preventing galvanic corrosion

HYLOGRIP

- Resistant to heat, vibrations, water, gases, oils, hydrocarbons and many other chemicals
- Available range of grades: low, medium and high
- Extensive temperature range
- A high array of viscosities
